Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Hansen.

The patent by Hansen (4,509,464) shows a method for spraying an aqueous liquid into the air intake duct (46) of a turbocharged piston engine for humidifying the intake air to reduce nitrogen oxide emissions. In a first stage in the method, the intake air is heated by a heat exchanger element (60) before the turbocharger and water mist is injected into the air intake duct after the first heating stage through at least one first nozzle. In a second stage the intake air is compressed by the turbocharger, causing its temperature to rise, and water mist is injected into the air intake duct through at least one second nozzle after the second stage. The amount of water supplied by the nozzles is adjusted according to the load and/or speed of rotation of the engine.

The apparatus comprises valve elements (49) used to control and/or to open/close the liquid flow passage leading to the nozzles.

The apparatus comprises control equipment by means of which the spraying action of at least some of the nozzles can be controlled.

Claim Rejections - 35 USC § 103

Art Unit: 3747

Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hansen.

The patent by Hansen does not specify the droplet size of the liquid mist or the pressure of the liquid supply piping. It is the view of the examiner that the pressure and the droplet size are obvious choices of design because no new or unexpected results are achieved.

Allowable Subject Matter

Claim 7 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

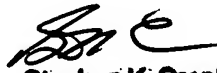

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Benton whose telephone number is (571) 272-4838. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Steve Cronin can be reached on (571) 272-4536. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
